

Smarter Inspection. Safer Operations

- Automate PPE, behavior, and restricted-area monitoring.
- Detect defects, corrosion, leaks, and thermal hot spots earlier.
- Track production flow, traffic, assets, and throughput in real time.
- Extract serial numbers, shipping data, and test logs with OCR.

Apply AI-powered vision to cameras and drones to automate industrial inspection, strengthen workplace safety, and improve operational efficiency. Pix Force turns existing camera and drone feeds into actionable data. Layer iTest or LabWorX over the platform for advanced automation, control, monitoring, and test workflow integration.

Safety & Compliance

PPE compliance, unsafe behavior alerts, restricted areas & geofencing

Inspection

Defect & corrosion detection, thermal & leak monitoring, wind turbine & asset testing

Operations

Production line tracking, traffic, and vehicle movement, bottleneck detection

Data & Measurement

OCR data extraction, 3D volumetry with LiDAR, test log digitization
