

Expert Full Lifecycle Partnership

- Accelerate development and commissioning of test systems.
- Leverage decades of expertise in controls, automation, and test engineering.
- Maximize uptime, performance, and long-term return on investment.

A&D Technology provides expert engineering services that help customers design, integrate, automate, and maintain advanced test systems. From concept development and feasibility studies to software development, commissioning, training, and ongoing support, our team partners with OEMs, Tier 1 suppliers, universities, and independent test facilities to deliver successful testing programs.

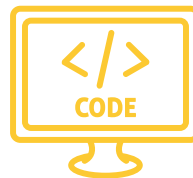

Consulting

Expert engineering development

Integration

Connect new and existing platforms

Programming

Custom software and automation

Support

Technical guidance repair, maintenance

Comprehensive Service Offerings

Engineering Studies

- Feasibility Studies
- Requirements Development
- Test System Design
- Concept Development
- Architecture Reviews
- Performance Optimization

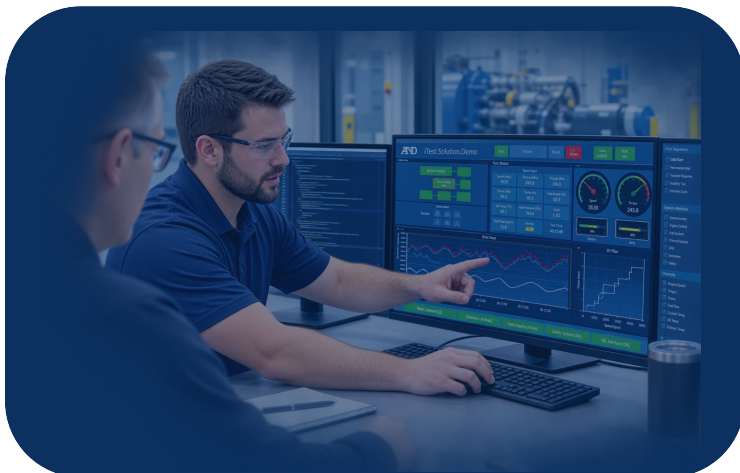

Integration Services

- Installation, Commissioning, Decommissioning
- Dynamometer Integration
- Instrumentation & Controls Integration
- Equipment Procurement
- Automation Deployment
- System Upgrades & Modernization

Software & Controls Development

- Custom Application Development
- Automation Logic Development
- Data Acquisition Programming
- HIL Integration
- iTest Customization
- Third-Party System Interfaces

Support & Lifecycle Services

- Technical Support
- Preventative Maintenance
- Training Programs
- Resident Engineers
- Remote Support
- Safety Belt Software Upgrades
