

Automate More. Integrate Everything. Be in Control.

- One-time software purchase with no mandatory subscription fees
- Custom programming for unique test requirements
- Flexible vendor-agnostic platform that connects and automates an entire test ecosystem

A configurable family of proven test automation software solutions that brings people, processes, and systems together on one platform, capturing high-quality test data that enables reporting, traceability, analysis, informed decision-making, AI-driven modeling, simulation, and long-term testing success.

Maximize Efficiency

Reduce test setup complexity, minimize downtime, and automate routine processes to save time, control costs, and increase productivity across your facility.

Test System Expertise

Backed by 40+ years of continuous development and 2,000+ installations worldwide, A&D delivers complete test solutions from concept to commissioning across diverse industries.

Scale & Evolve

Expand across new projects, applications, facilities, and technologies with a platform engineered for long-term performance and growth.

iTest Family:

From entry-level simple control to multi-facility test automation, to offline simulation, iTest offers a variety of solutions to fit virtually any application, requirement, and budget. Receive software updates and enhancements with the optional Safety Belt Software Assurance Program.

Product	Purpose	Typical Industries	Applications
iTest.Micro	Low-end runtime for simple tests with basic automation and light control/logging	Automotive OEMs, Automotive Component Suppliers, Aerospace	Low Power Motor Performance Test Rigs, FTIR Data to CAN Component Testing
iTest.Nano	Runtime for creating input GUIs and task-based operator screens.	Customers needing workflow applications in a familiar environment	Workflow apps with LabWorX, Barcode Scanner Inventory Apps
iTest.Offline	Office-based simulation tool for offline testing and development	iTest Micro, Standard, Pro and BTS Users	Debugging before deployment
iTest.Pro	Full-capability test and development system with development tools	Automotive, Marine, Renewable Energy, eMobility	Engine, eMotor, Powertrain, EOL Testing, Dyno Control
iTest.Standard	Full-capability runtime environment	Automotive, Off-Highway, Marine, Renewable Energy, Appliances	Engine, eMotor, Powertrain, EOL Testing, Dyno Control
iTest.BTS	Automation and development tools for battery applications	Battery Manufacturers, EV, Marine, Renewable Energy	Battery Cells, Modules, Packs
iTest.DC	Open platform for real-time models and HILS integration	Customers using MBD platforms and HILS systems	Running models on real-time control systems
iTest.FC	Recipe management and operator-guided batching software with traceability and quality control	Food & Beverage, Commercial Bakeries, Nutraceuticals, Cosmetics, Chemicals	Batch Production, Ingredient Weighing, Lot Tracking
