

Remotely Monitor Test Labs

- Centralized data storage and retrieval for multiple terabytes of test data.
- Seamless integration of test systems from multiple vendors.
- Configurable dashboards with customized views across all test systems.
- Automated test utilization tracking and reporting.
- Remote monitoring, notification, and response capabilities.

Transform disconnected tools, test systems, and workflows into a unified lab management platform. LabWorX integrates equipment and information from across your facility, creating a centralized environment for managing assets, processes, and data.

Automate, Digitize and Streamline

Automate routine workflows and digitize manual processes such as inventory management, workload tracking, equipment lifecycle management, calibration scheduling, and performance monitoring.

Improve Visibility and Decision-Making

Capture and centralize laboratory data to support utilization tracking, forecasting, reporting, process auditing, downtime detection, and operational analysis.

Adapt to Your Dynamic Assets and Processes

Every lab operates differently. LabWorX is highly configurable and can be tailored to your specific workflows. If you can document the process, LabWorX can automate and manage it.

System Architecture

Standard LabWorX Components

LabCentral

The centralized server that provides data storage and retrieval, test system utilization tracking, test request scheduling, as well as live monitoring of any system through configurable dashboards.

LabMinder

An automated notification and response system that allows for 24/7/365 unattended operation; the system can be configured to provide specific responses when certain errors occur, and notify designated personnel of significant events by text or email.

LabReporter

An automated report generator that formats incoming data and makes it available via the LabCentral server.

LabApps

Android-compatible apps that provide notification and response capabilities via hand-held devices.

Test System Agent

An interface package required for integrating any test system with LabWorX. LabAgent is included with any A&D's software, while a LabAgent plug-in is available for use with standard third-party test systems.

iViewBox is an IO package that provides the interface to third-party hardware-only test systems.
